

How to Popularize Particle Physics

Elizabeth H. Simmons
Michigan State University

DPF Riverside Meeting 8-28-04

Outline

- Benefits
- Preparation
- Examples
- Conclusions

What is the Benefit of Popularizing Particle Physics?

Popularizing Particle Physics

- What:
 - Convey the inherent excitement and fundamental goals of particle physics to the public
 - Help the public appreciate the beauty and creativity of the scientific endeavor
- Why:
 - Inspire the next generation of scientists
 - Promote scientifically-informed public policy
 - Maintain support for continued funding of physics
 - Help our families understand why we love physics

Who is this “public”?

Participation

Who should get involved?

All of us: the stakes are high

Should we all start composing monographs or lecturing people in the grocery checkout line?

Probably not...

Some of you may be thinking:

- I don't want to visit grade school classrooms - what can I do that I'd be comfortable with?
- I'd like to be part of an outreach program, but don't know how to get started.
- How do I know my efforts will make a real difference?

Consider the NSF's Merit Criteria

- Intellectual merit
- **Broader Impact** [many components]
 - advance discovery and understanding while promoting teaching, training, and learning
 - broaden participation of underrepresented groups
 - enhance infrastructure for research and education
 - disseminate results broadly
 - confer benefits upon society

...and some examples NSF gives

Research + Education

- Involve students (K-G) in proposed activities
- Help in training of K-12 science/math teachers
- Involve grad students, postdocs in UG teaching
- Integrate research into your teaching (K-G)
- Encourage student participation at conferences

Broad Dissemination

- Make data available electronically
- Present results in formats useful to Congress & industry
- Participate in multi- & inter-disciplinary conferences
- Publish & present results in non-technical venues

Lessons

- Education & Outreach activities can satisfy the “broader impact” criterion for an NSF proposal.
- Like “broader impact”, education & outreach encompasses a variety of activities
 - Some, we already do as a matter of course
 - Many will directly enhance our research efforts
 - Possibilities exist to suit any set of talents
 - Examples and suggestions abound, even on the NSF site

Write popular articles

Visit schools

Go on local radio

Create museum exhibits

Judge science fairs

Give public lectures

Be a museum docent

Train teachers

How can I choose what to do?

Mentor K-12 students

Run an REU/RET program

Be an APS intern

Run a vacation/summer science camp

Train museum staff

Create a local TV show

Host a book club

Write books

Do 'science theater'

Host a conference for K-12 students

Match up with an audience

- Your interests

- Topics? Type of audience?

- Your talents

- Writing? Cartoons? Live demos? Q&A? training research students?

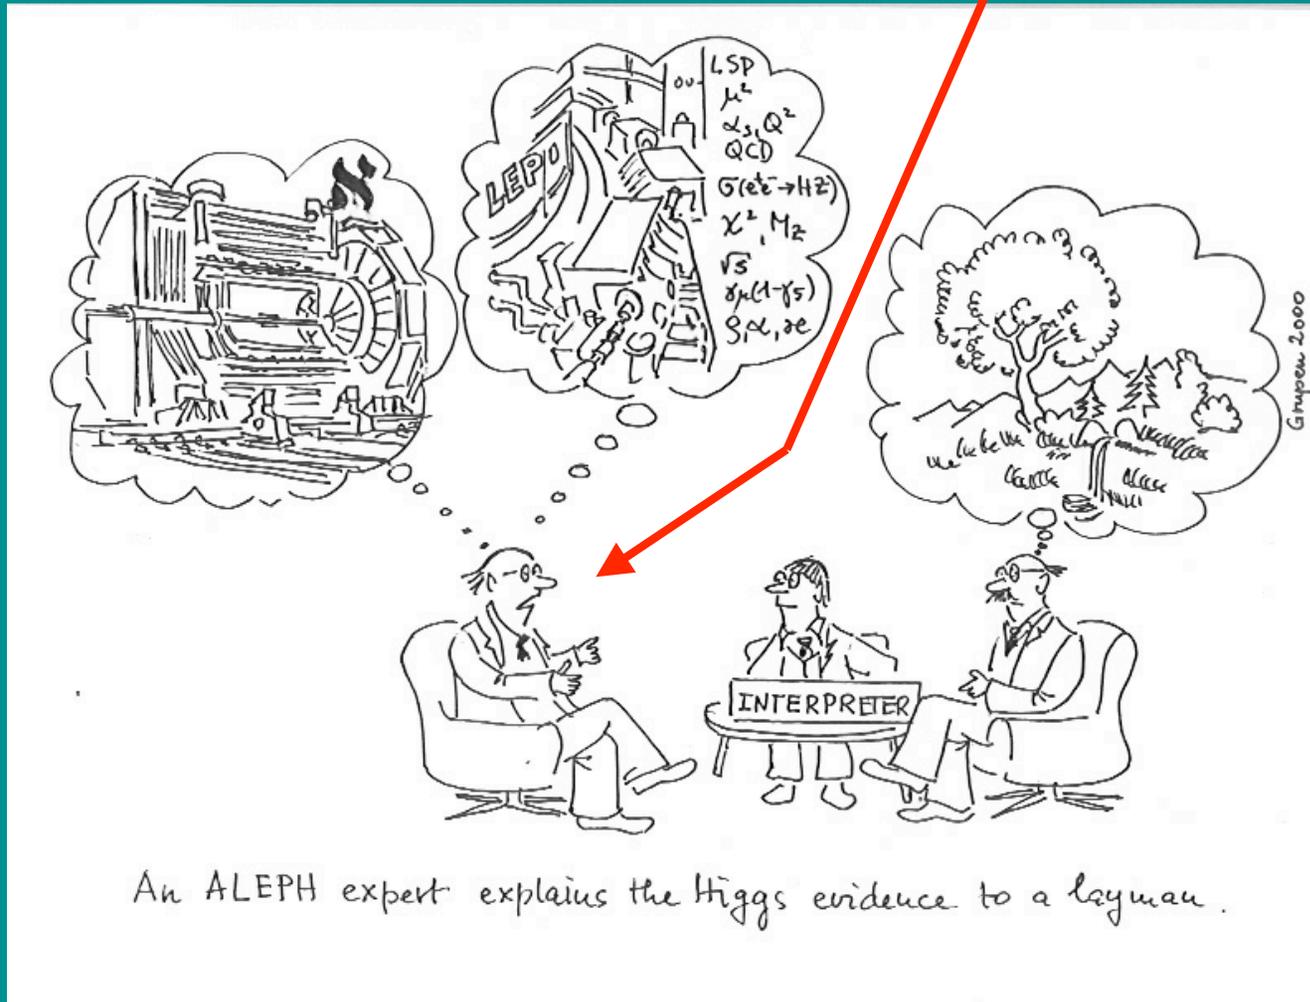

- The intended audience

- What do they find interesting?
- What is their science and math background?
- What are their goals?

Frame your ideas accordingly

- Relate your favorite topic to their interests
- Tailor your communication to their level
- Choose your actions to help meet their goals

Don't be like him...

From "What is the Higgs?" by Claus Grupen (2000)

aleph.web.cern.ch/aleph/aleph/AlephAtPlay/grupen/grupen.html

Contact your potential audience

- What education/outreach activities and materials are already being used by your audience?
- What do they need in addition?
 - Extension/enlargement of existing programs?
 - New programs or materials?
 - Coverage of different topics?
 - Translation of existing materials into another language?
 - Help making practical use of new information?

Find Resources to Assist You

- What existing items can aid your efforts?
 - Contents of your university's demo room (borrow!)
 - Your lab's outdated equipment slated for disposal
 - Websites about others' outreach efforts and materials (see e.g. links from www.aps.org/units/dpf/education)
- What local individuals, organizations, or informal networks can you partner with?
 - Can you start by joining an existing outreach effort?
 - Are local museums, radio stations, scout troops, or rotary clubs looking for volunteers with science expertise?
 - Are other HEP folk in your area interested in outreach?
 - Does your local physics students' club have ideas?

Pitfalls

- **Barriers to effective communication**

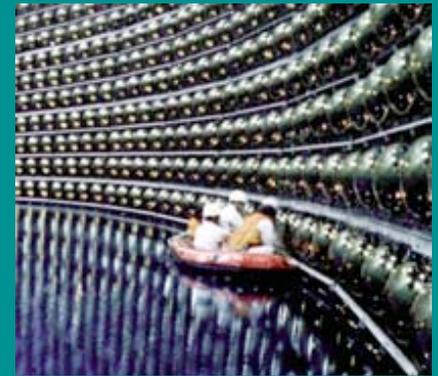

- Expert's knowledge/assumptions
- Lack of solid metaphors & analogies

- **Formatting errors**

- Reading → hypnotism
- No jokes
- Jargon
- No surprises, action, suspense

www.wfu.edu/~matthews

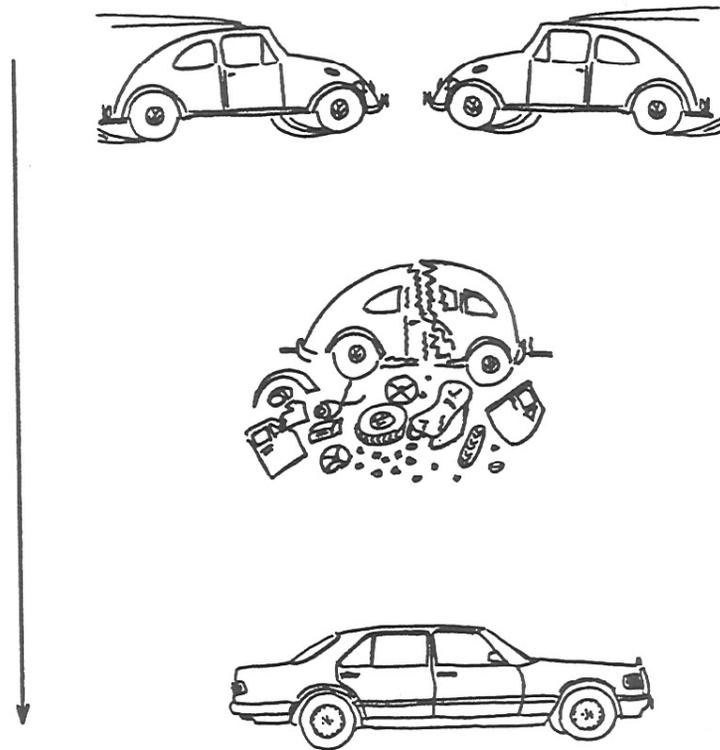

www-sk.icrr.u-tokyo.ac.jp/doc/sk/

- **Lack of followup**

- Did the data you provided arrive in a readable format?
- When the equipment you donated goes haywire, can the recipient cope?
- When future questions occur to your audience, do they know where to get more information?

Higgs production in e^+e^- collisions:
a rare event!

From "What is the Higgs?" by Claus Grupen (2000)
aleph.web.cern.ch/aleph/AlephAtPlay/grupen/grupen.html

What have others done
successfully?

Involve Lecture Audiences

- Richard Berg (Maryland) runs Physics is Phun -- his Physics IQ Test gets the audience to predict the outcomes of demonstrations

www.physics.umd.edu/outreach/

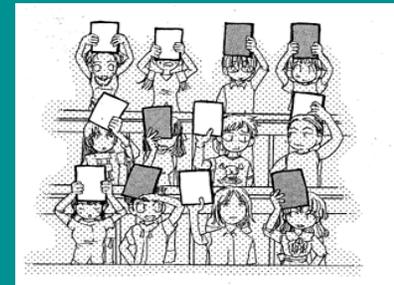

- Eric Mazur (Harvard) created Peer Instruction -- getting the audience to discuss conceptual puzzles and vote on the answer

mazur-www.harvard.edu/

- Masako Bando (Aichi) lectures to non-scientists -- turning the audience into an experiment modeling complex phenomena, learning by “being”

leo.aichi-u.ac.jp/~bando/

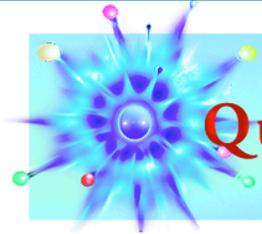

Experiencing a Phase Transition

If your current age (in years) is an odd number, please stand up now. Otherwise, stay seated.

1. Each time I say “**check**,” see if more of your 4 nearest neighbors [front, back, left, right] are currently on their feet or seated.
2. Each time I say “**act**,” move as follows:
 - If more of your neighbors in step 1 were on their feet, you stand. If more were seated, you sit.
 - If there was a tie (2 standing, 2 seated) in step 2, you sit down (no matter what your previous position)

Variations (cf. Bando): linear Ising model, other spin systems, chain reactions from nuclear decays (give audience paper balls to throw as “neutrons”)

Involve students and teachers in ongoing HEP research

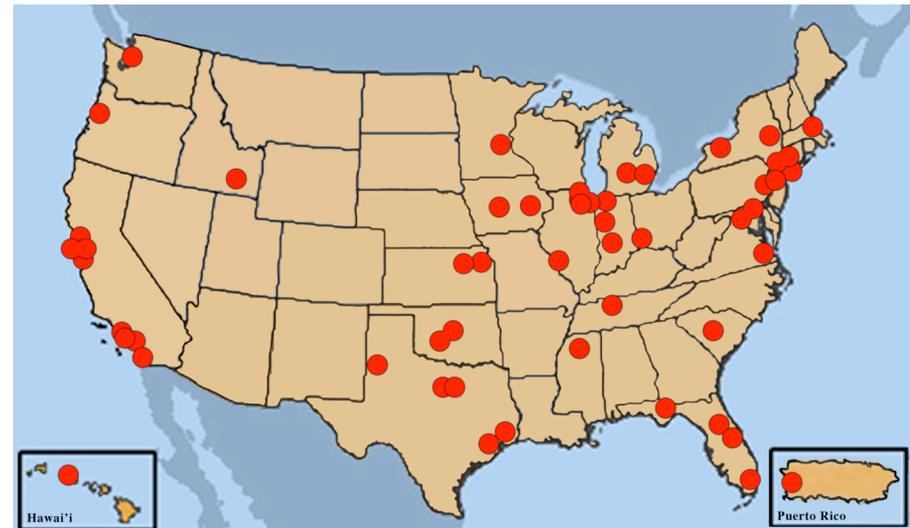

QuarkNet

The QuarkNet Collaboration

Year 6: now in **25** states & Puerto Rico

52 centers: **208** mentors & **507** teachers

Associated with **11** experiments conducted at **7** DOE labs & CERN

quarknet.fnal.gov

Getting Particle Physics into the Classroom

(sample QuarkNet educational module)

Title: Use conservation of momentum to calculate the top quark mass from D0 data

Subject: Physics

Grade Level: Introductory courses at high school or college level

Abstract: Students use momentum conservation to calculate the top mass. This activity examines the fingerprint of a top/antitop event that took place in the D-Zero Detector at Fermilab on July 9, 1995. Builds on student understanding of vector addition and depends upon only a small amount of particle physics explanation.

Learner Description/Environment: Suitable for a typical introductory physics class either at the high school or university level. We provide two methods of delivery, a traditional activity introduced and led by the teacher or an on-line version where the students control their own learning.

Time Frame: One or two days

Learner Outcomes: Students will know and be able to:

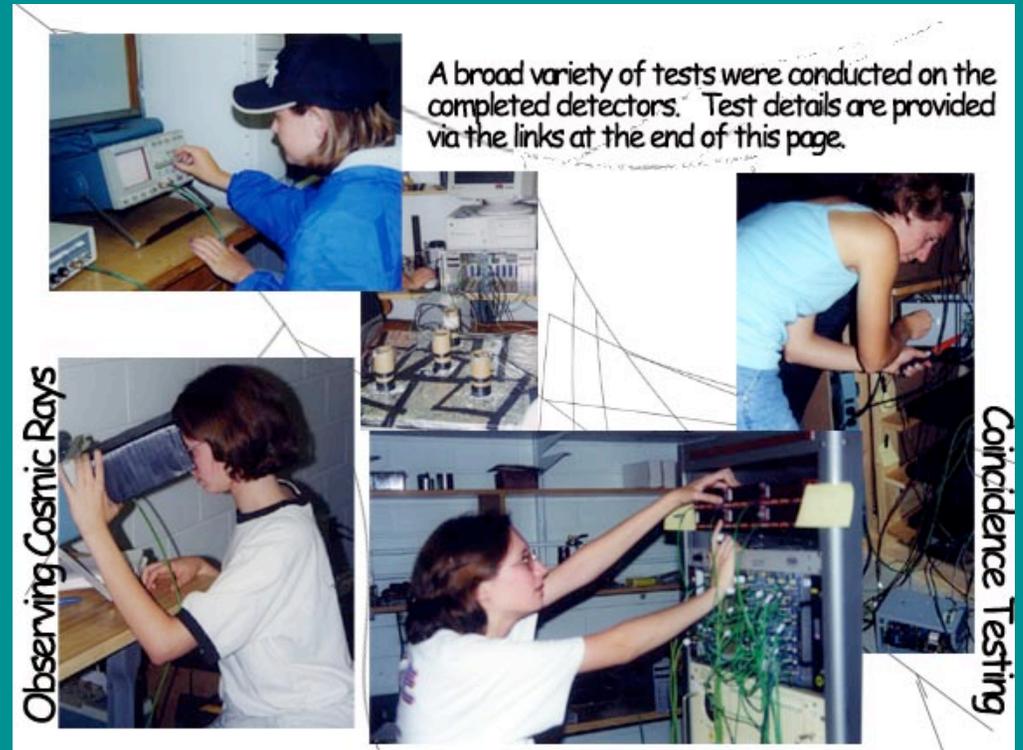

- Calculate the mass of the top quark from real data
- Apply what they have learned about vector addition to a real problem.
- Apply their understanding of conservation of momentum to real data.

NOTE: website includes guidelines based on trying the project in actual classrooms

Create Research Consortia Based in High Schools

csr.phys.ualberta.ca/nalta/

marian.creighton.edu/%7Ebesser/physics/crop.html

NALTA is a collaboration of experimental groups in Canada and the United States engaged in the study of high energy cosmic rays. What makes NALTA unique is the involvement of high-schools and colleges in this endeavor. Teachers and students actively contribute to the physics research while learning about an exciting area of modern science.

Notes from NALTA participants:

- Tremendous excitement about
 - building & maintaining own equipment
 - large-scale research via local measurement
- Must work with teachers to integrate NALTA into the regular physics curriculum
 - all of their students can benefit
 - new student researchers will be recruited
- Good source of science fair projects
- Biweekly follow-up needed (e.g. phone)
- Experienced teachers can mentor new ones
- MS or college students can assist college faculty with support of school teams

Convey Scientific Content to those skilled at reaching the public

CfCP Short Courses
1-2 Per Year Planned with Follow-Up

Goal of This Course:
To incorporate modern cosmology into planetarium programming

- **Framework for Understanding Cosmology**
- **Tools to Use**
- **Seeds for Future Collaboration**
 - CfCP Visitors Program
 - Future Short Courses
 - Shows for the Public

Origin of Structure in the Universe - September 26, 2003 - Landsberg

Participants' Comments

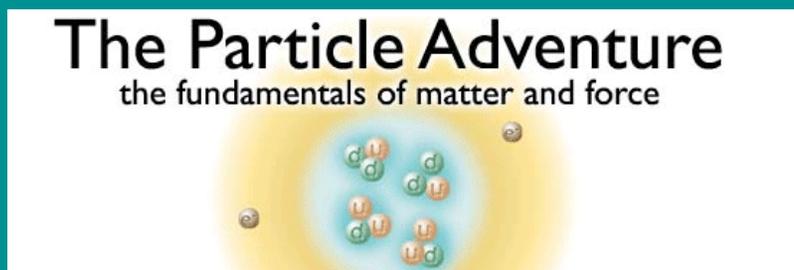

My after-the-show audience discussion will be affected immediately. I am now planning at least two new public shows...

It would be an extraordinary project for you to create content, video or otherwise, that we would all use in our domes. I can't stress that point enough.

Conclusions

What can you do?

- **Think broadly** about education & outreach
 - You are probably already doing some ... more is always needed
 - There are many ways to contribute (talks, consulting, writing...)
- **Join existing programs or create new ones**
 - Your work will have **impact** if you prepare well (assess audience needs, form partnerships)
 - The **effort** involved will be minimized if you take advantage of existing resources (networks, materials, examples)
- **Support the efforts of others:**
 - Encourage your students & postdocs to become involved
 - Help out with a program a junior colleague is starting
 - Make sure your department values education & outreach when promotions and raises are discussed

Upcoming Education/Outreach Efforts from the DPF EPO Committee

- Searchable database of HEP public lectures
- Listserv/archive on education/outreach
- More training at APS/AAPT New Faculty Workshop and Chairs Workshop
- Outreach sessions at all DPF meetings
- **Einstein for a Day** national outreach days in March 2005 for the World Year of Physics
